STUDI / DÉVELOPPEUR WEB ET WEB MOBILE

FantasyRealm

USER MANUAL

A practical guide to the application, its user roles, and demonstration journeys for exam evaluation.

IN THIS GUIDE

01 Getting started + access
02 Player journeys + character management
03 Employee and administrator tools
04 Demo accounts + validation checklist

01 / ORIENTATION

Getting started

FantasyRealm is a local character-creation and community website. Start with the Home page, then follow the journey that matches your account role.

Open the application

1 **Start the local services**
In the XAMPP Control Panel, start **Apache** and **MySQL**. The local database and PHP API must be available. MongoDB is needed for staff activity logs.

2 **Open FantasyRealm in your browser**
Navigate to **http://localhost/FantasyRealm/Frontend/Html/index.html**. Use the website through Apache, not by opening HTML files directly.

3 **Select a journey**
Use **Register** or **Login** for player features. Signed-in users can open the gear-shaped **Settings** menu for their character dashboard and, if authorized, staff dashboards.

Which account can do what?

Account	Main destination	Typical permissions
USER	Character Settings	Create, duplicate, delete, restore and share eligible characters; submit reviews
EMPLOYEE	Employee Dashboard	Moderate characters and reviews; manage accessories and player accounts
ADMIN	Admin Dashboard	Manage employees, view activity logs, and use employee tools

NAVIGATION TIP

Public pages such as **Home** and **Character Gallery** are visible without signing in. Character creation and account management require authentication.

02 / PLAYER JOURNEY

Create an account and character

A USER account is the standard starting point. New registrations receive the USER role by default.

Register and sign in

1 **Create an account**
Open **Register**; enter a username, email address, password and confirmation. The password must be at least 12 characters (and within the server limit). Submit the form.

2 **Sign in**
Open **Login**, enter the registered email and password, and submit. Use the Settings menu to reach **Character Settings**.

Build your first character

3 **Open Create Character**
From Home or the top navigation, select **Create Character**. The page includes a live visual preview and a customization form.

4 **Choose an identity and appearance**
Enter a character name, select gender, hair style/color, skin tone, eye style/color and any available equipment. The preview updates as you select options.

5 **Save the new character**
Select **Create Character**. A successful submission confirms that the character was created and is **waiting for approval**.

IMPORTANT WORKFLOW

A newly created character does not immediately appear in the public gallery. Staff must approve it first, and the owner must then choose to share it.

03 / PLAYER JOURNEY

Manage and share characters

Your personal dashboard controls private character records. The Gallery shows only characters that have been approved and shared.

My Characters: available actions

Action	How to use it / what happens
Duplicate	Choose Duplicate on a character card, enter a new name, then confirm. The copy enters the approval process.
Share / Unshare	For an approved character, choose Share to make it public or Unshare to make it private again.
Delete	Choose Delete and confirm the dialog. The character moves to Deleted Characters.
Restore	Find the item under Deleted Characters and choose Restore.
Permanently Delete	Available for deleted characters. This action cannot be undone. Use only with expendable test data.

Discover and review community characters

1. **Open Character Gallery**
   Select **Characters**. Filter by **Creator** or **Creation date**; use **Clear Filters** to reset. Pagination appears if there are more than 60 results.

2. **Open a character**
   Select **View Character** to read the character profile and view its appearance and equipment.

3. **Submit a review**
   While signed in, choose a star rating and enter a comment in **Leave a Review**. Submitted reviews stay hidden until employee approval.

KEYBOARD ACCESS

Use **Tab** and **Shift+Tab** to navigate controls. When a native confirmation dialog is open, **Escape** closes it unless an operation is being processed.

04 / STAFF JOURNEY

Employee Dashboard

Employees moderate community content and maintain application data. Only an active EMPLOYEE or ADMIN account can access these tools.

Moderate character submissions

1. **Open the dashboard**
   Log in with an authorized staff account and select **Employee Dashboard** from Settings.

2. **Review Pending Characters**
   Open the moderation queue, inspect each pending character, and choose **Approve** or **Reject**. A rejection requires a reason.

3. **Confirm the outcome**
   Approved characters become eligible for owner sharing. Rejected characters remain non-public; the owner can see the moderation outcome in their dashboard.

Moderate reviews and manage resources

- **Pending Reviews:** review submitted ratings and comments, then approve or reject. Only approved reviews are shown publicly.
- **Manage Accessories:** create equipment items, choose the correct equipment type, and enable/disable available items. Items already in use may not be removable.
- **Player Accounts:** review player accounts and use the available suspend/reactivate tools as needed.

SAFE DEMONSTRATION

For the exam, moderate a clearly identified test character and a disposable test review. Avoid changing genuine user records or permanently deleting useful data.

05 / STAFF JOURNEY

Admin Dashboard

Administrators can manage staff access and review audit records. They can also enter the Employee Dashboard to use moderation tools.

Administrator sections

Section	What to do
Overview	Check counts of employees, active/suspended staff, players and administrators.
Employee Management	Find a registered USER and use **Promote Existing Player** to grant EMPLOYEE access.
Employee Accounts	Search or filter employees and, where needed, suspend or reactivate an account.
Activity Logs	View recent recorded staff actions; this section requires the local MongoDB service and PHP extension.

Demonstrate the ADMIN journey

1. **Sign in with an existing administrator**
   Open the **Admin Dashboard** using an account already configured with the ADMIN role. The backend verifies permissions on every protected API request.

2. **Promote a dedicated test player**
   In **Employee Management**, search for the designated test player, select it and choose **Make Employee**. Its existing login credentials remain unchanged.

3. **Open Employee Dashboard**
   Use the top navigation or Settings menu to access the Employee Dashboard and confirm the promoted employee role or carry out a moderation scenario.

SECURITY REMINDER

Do not use a production administrator account for a public demo. Never publish a working ADMIN password in a Git repository or a widely distributed PDF.

06 / EVALUATION SETUP

Demonstration test accounts

The account profiles below cover the three roles needed for an evaluator to exercise FantasyRealm. They are proposed local test identities, not accounts that this PDF has created.

Role	Proposed local test identity	Purpose
USER	**demo.player@example.com** Username: **DemoPlayer**	Register/login, character creation, sharing and reviews
EMPLOYEE	**demo.employee@example.com** Username: **DemoEmployee**	Approve/reject characters and reviews; manage accessories
ADMIN	**demo.admin@example.com** Username: **DemoAdmin**	Promote staff, manage employees and view activity logs

ACCOUNT STATUS - SETUP REQUIRED

These credentials are **examples only**. No local accounts were created or verified by generating this document. The repository seed file includes sample USER/EMPLOYEE/ADMIN records, but their password hashes are placeholders and are not usable for login.

Prepare accounts before the assessment

1. **Player account**
   Use the site Registration page to create DemoPlayer with a unique test password. Confirm login succeeds.

2. **Employee account**
   Create DemoEmployee as a USER, sign in with an existing ADMIN account, then promote DemoEmployee from Admin Dashboard. Verify employee access.

3. **Administrator account**
   Use a separately prepared local ADMIN account, securely provisioned by the project owner. Do not assume that public registration can create an administrator.

Private test credential handover

Provide the evaluator with the **actual passwords through a separate private channel**, after verifying all three accounts. Do not write real passwords into this shared document.

07 / EVALUATION

Suggested test journeys

Follow this short sequence for a repeatable demonstration. Use disposable data and record the outcome of each journey in the project test report.

Journey	Input or action	Expected result
USER 01	Register / log in with test USER	Valid session and access to Character Settings
USER 02	Create a character	Character saved as pending approval
EMP 01	Approve the test character	Character approved; owner may share
USER 03	Share; filter Gallery by creator	Public character appears among matches
USER 04	Submit a review	Review waits for moderation
EMP 02	Approve the review	Review becomes publicly visible
ADMIN 01	Promote a new test USER	User gains employee permissions
ADMIN 02	Open activity logs	Recent recorded staff actions shown if MongoDB is available

Common issues and checks

- **Blank data or an API error:** verify Apache, MariaDB, the current database structure, Composer dependencies and **Backend/.env**.
- **Access denied:** confirm the user is logged in, not suspended, and has the required database role.
- **Gallery looks empty:** public visibility requires both staff approval and owner sharing; check active filters too.
- **Activity log unavailable:** verify MongoDB is running and the MongoDB PHP extension is enabled in XAMPP.

KNOWN LIMITATION

Password reset is currently disabled pending secure email delivery. The current project is intended for **local XAMPP demonstration**, not a public production deployment.
